NiSource Gas Transmission & Storage Improves Project Management Efficiency

NiSource Gas Transmission & Storage companies own and operate about 15,000 miles of strategically-located interstate natural gas pipelines, integrated with one of the largest underground storage systems in North America.

Columbia Gas Transmission, Columbia Gulf Transmission, Crossroads Pipeline, Central Kentucky Transmission Company, Hardy Storage Company and Millennium Pipeline serve customers in more than 15 states. From the Gulf Coast to the Midwest, Mid-Atlantic and Northeast, our systems connect premium natural gas supplies with some of the nation’s strongest energy markets.

More than one trillion cubic feet of natural gas flows through our pipeline and storage systems each year, providing competitively priced, clean energy for millions of homes, businesses and industries.

Business Challenge

- Centralize project data, while standardizing project management across the engineering offices
- Re-enforce adherence to common business processes
- Introduce standard methodologies across project types
- Minimize the level of effort for reporting status
- Improve capacity planning and forecasting

Solution Objectives

- Worked with Oracle Platinum Business Partner to implement Oracle’s Primavera P6 Enterprise Project Management
- Increased precision in project delivery, ensuring standard business processes across the project life cycle
- Enabled the engineering offices in the use of standard methodologies to produce consistency in planning and scheduling
- Reduced level of effort in status reporting while increasing consistency
- Increase decision-making efficiency and transparency in reporting and forecasting resource capacity
